## RoHS Confirmation of Conformity

Dear Sir or Madam,

The Regulation on Substances in Electrical and Electronic Equipment (ElektroStoffV - to implement Commission Delegated Directive (EU) 2015/863 of 31 March 2015 [RoHS II]) prohibits the placing on the market of electrical and electronic equipment, as defined in Article 2 No. 1 ElektroStoffV, if homogeneous materials containing one or more of the substances mentioned in the Regulation in a concentration greater than the permitted maximum are processed within it.

At this current point in time the following substances are affected: lead, mercury, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE), Bis(2-ethylhexyl) phthalate (DEHP), Butyl benzyl phthalate (BBP), Dibutyl phthalate (DBP), and Diisobutyl phthalate (DIBP) - which are not permitted to exceed the permissible maximum concentration of 0.1% weight by weight (w/w) in each homogeneous material - and cadmium, which is subject to a maximum concentration cap of 0.01% weight by weight (w/w) for each homogeneous material.

The electrical and electronic equipment, as defined in ElektroStoffV, produced by Gira does not contain any substances named in this Regulation in a concentration exceeding the maximum permissible concentration, due regard having been taken of the exceptions listed in Annexes III and IV of the RoHS Directive.

Kind Regards

Christian Feltgen  
Managing Director
